SUMMARY

M.Sc. IT Engineering student at FH Wedel, Germany, with hands-on experience building full-stack applications using Python, Flask, React/TypeScript, and SQL. Deployed a live full-stack Expenses Tracker with REST APIs and data visualization, and built automation workflows using n8n. Exploring AI automation and cybersecurity through academic research. Seeking a Werkstudent Software/AI Developer role to contribute immediately within a technical team.

PROJECTS

Expense Tracker | Full-Stack Web App — Python (Flask) · React (TypeScript) · SQLite · REST API

- Architected a full-stack expense management app end-to-end, pairing a Flask REST API backend with a React/TypeScript front-end to give users a single place to log and track spending.
- Designed a normalized SQLite schema for persistent storage and built data-visualization dashboards (category breakdowns and spending-trend charts), turning raw transaction data into actionable, real-time spending insight.

Daily Quote Automation | n8n Workflow — n8n · REST API · JavaScript

- Built an automated daily workflow using n8n that fetches motivational quotes from a public REST API on a scheduled trigger, removing the need for manual content sourcing.
- Processed and formatted API response data using JavaScript code nodes, delivering a reliable, hands-off automation pipeline that runs without manual intervention.

Currency Converter Web App — HTML · CSS · JavaScript · REST API

- Developed a responsive currency conversion tool with real-time REST API exchange-rate data and an integrated AI-assisted query feature, letting users get accurate conversions instantly via natural-language input instead of manual lookups.

Automatic Email Replier | Automation Script — Python · SMTP · IMAP

- Automated intelligent email monitoring and auto-response using SMTP and IMAP, eliminating manual reply triage and ensuring incoming messages get a timely response without user intervention.

GitHub: github.com/AanchalSaini595/AUTOMATIC_EMAIL_REPLIER.PY

System Intrusion Detection using mmWave Sensor & ESP32 | IIoT Project — ESP32 · mmWave Sensor · IIoT

- Built an intrusion detection system using an mmWave sensor interfaced with ESP32, covering hardware setup, wiring, and embedded software, to enable reliable, non-contact presence and distance sensing for security monitoring.
- Designed and ran a measurement methodology to acquire and evaluate distance and presence-detection data, validating system accuracy against defined requirements before final deployment.

IIoT Project, Summer Semester 2026, FH Wedel | Instructor: Carsten Burmeister

RESEARCH

AI-Generated Cyberattacks & AI-Based Defensive Systems — IIoT Project, FH Wedel (in progress)

- Writing a review paper researching how AI techniques are used to generate cyberattacks and the corresponding AI-based defensive systems, drawing on IEEE, arXiv, ACM, and Springer sources.

EDUCATION

M.Sc. IT Engineering — FH Wedel, University of Applied Sciences, Germany | 2026 – Present

Bachelor of Computer Applications (BCA) — Chandigarh University, India | 2021 – 2024

SKILLS

Languages: Java, Python, JavaScript, SQL, C++

Web & Frameworks: HTML, CSS, Flask, REST APIs, React, TypeScript

Data & AI: NumPy, Pandas, Matplotlib, Scikit-learn, TensorFlow

Automation: n8n, REST APIs, SMTP/IMAP, Workflow Automation

Tools & Platforms: Git, GitHub, SQLite, Linux, Windows, Render

Spoken Languages: English (Fluent), Hindi (Native), German (Beginner)

CERTIFICATIONS

- Introduction to Cybersecurity Tools & Cyberattacks — IBM / Coursera (Jul 2022)
- Operating Systems: Overview, Administration & Security — IBM / Coursera (Jul 2022)
- Introduction to Industry 4.0 & Industrial IoT (IIoT) — IIT Kharagpur / NPTEL
